Environmental Information for Standard Offer Service Provided by Pepco

The following environmental information is for Pepco customers with Standard Offer Service. Standard Offer Service is provided to those customers who have not chosen an alternative electricity supplier.

Power plants can generate electricity from a number of different fuel sources, resulting in different emissions. Pepco will report fuel sources and emissions data to customers twice annually, allowing customers to compare data among the companies providing electricity service in the District of Columbia.

The standardized environmental data provided are for January 1, 2009 through December 31, 2009.

For additional information about this label, visit our Web site at pepco.com.

Energy Source (Fuel Mix)
January 1, 2009 – December 31, 2009

Coal	49.3%
Gas	9.6%
Nuclear	35.6%
Oil	0.3%
Unspecified Fossil	0.0%
Renewable Energy	
Captured Methane Gas	1.4%
Geothermal	0.0%
Hydroelectric	1.1%
Solar*	0.0%
Solid Waste	1.5%
Wind	0.8%
Wood or other Biomass	0.4%
Unspecified Renewable	0.0%
Total	100%
Renewable energy sources subtotal:	5.2%
*Solar renewable energy sources total:	0.01%

Air Emissions

The amount of air pollution associated with the generation of electricity production for Pepco and for the Mid-Atlantic region is shown below.

**Pounds Emitted per Megawatt Hour
of Electricity Generated**

	Pepco	Mid-Atlantic Regional Average
Sulfur Dioxide (SO ₂)	5.7	5.7
Nitrogen Oxides (NO _x)	1.7	1.7
Carbon Dioxide (CO ₂)	1,133	1,133

CO₂ is a "greenhouse gas," which may contribute to global climate change. SO₂ and NO_x released into the atmosphere react to form acid rain. NO_x also reacts to form ground level ozone, an unhealthy component of "smog."
