

Maryland Environmental Fuel Source Information

The following environmental information is for Pepco customers who have not chosen an alternative electricity supplier.

Power plants can generate electricity from a number of different fuel sources, resulting in different emissions. Pepco reports fuel sources and emissions data to customers twice annually, allowing customers to compare data among the companies providing electricity service in Maryland.

The electricity provided to Pepco's customers is supplied by the PJM Interconnection (PJM). PJM is the federally regulated regional transmission system operator that coordinates the movement of wholesale electricity in all or parts of Delaware, Illinois, Indiana, Kentucky, Maryland, Michigan, New Jersey, North Carolina, Ohio, Pennsylvania, Tennessee, Virginia, West Virginia and the District of Columbia.

The standardized environmental data provided are for July 1, 2017 through June 30, 2018. This disclosure is required by the Public Service Commission.

For additional information, visit our website at pepco.com.

An Exelon Company

ENERGY SOURCE (FUEL MIX)

July 1, 2017 THROUGH June 30, 2018

Coal	30.8%
Natural Gas	28.6%
Nuclear	35.4%
Oil	0.2%
Unspecified Fossil	0.0%
Renewable Energy	
Captured Methane Gas	0.3%
Geothermal	0.0%
Hydroelectric	1.1%
Solar	0.2%
Solid Waste	0.5%
Wind	2.6%
Wood or other Biomass	0.2%
Unspecified Renewable	0.0%
Total	100%
Renewable energy sources subtotal:	5.0%

AIR EMISSIONS

The amount of air pollution associated with the generation of electricity for the PJM region, which includes Pepco, is shown below.

Pounds Emitted per Megawatt Hour of Electricity Generated

	Pepco	Mid-Atlantic Regional Average
Sulfur Dioxide (SO ₂)	0.7	0.7
Nitrogen Oxides (NO _x)	0.6	0.6
Carbon Dioxide (CO ₂)	945.1	945.1

CO₂ is a "greenhouse gas," which may contribute to global climate change. SO₂ and NO_x released into the atmosphere react to form acid rain. NO_x also reacts to form ground level ozone, an unhealthy component of "smog."
