

EXPLORE YOUR SOLAR POSSIBILITIES.

Our free, online **WattPlan**[®] service can help you estimate how much energy a solar generating system might generate for you, how much you could save each year on your energy bills, and how much you can reduce your carbon footprint.

To learn more about our **WattPlan**[®] service, please visit us online: pepco.wattplan.com.

THE POWER OF THE SUN

CLEAN, PURE ENERGY.

Do you know that the sun is the most abundantly available renewable energy source in the world? When you tap its power, you access clean, pure energy.

An Exelon Company

Our celebration of Earth Month is the perfect time to recognize the sun as the renewable energy source it is. Today, our modern conveniences can be powered by the sun. And thanks to advances in the local energy grid, you can take advantage of solar options that leave a cleaner planet for future generations.

As options for solar continue to grow, our **Green Power Connection™** team works hard to connect you to them. We are committed to a clean energy future and want to help our customers and communities make informed decisions about their energy.

Producing your own energy with a private solar energy system can help you earn credits on your energy bill during times when your solar system is producing more energy than you need.

Whether you are ready for your own private solar energy system or just want to learn more about solar energy, Green Power Connection can help guide you through your journey. We invite you to learn more by viewing tools and resources available on our website.
