Ways to Save Energy While Staying Warm

If you've noticed that some of your rooms are too cold, it may be time to switch to a high-efficiency HVAC system. As much as half of the energy used in your home goes toward cooling and heating. Replacing your heating system with a new **high-efficiency HVAC system** can make a big impact on your energy costs now and for years to come.

Signs It May Be Time to Replace Your HVAC System:

- **Your heat pump or air conditioner is more than 10 years old.**
Make the switch to a high-efficiency unit that can save you up to 30 percent on heating and cooling costs.
- **Your equipment needs frequent repairs and your energy bills are going up.**
Consider replacing your heating and cooling equipment as it may have become less efficient.
- **Your heating or cooling system is noisy.**
You could have an undersized duct system or a problem with the indoor coil of your cooling equipment.

Learn more at [pepco.com/HVAC](https://www.pepco.com/HVAC) and talk to your contractor about installing a high-efficiency system.

EmPOWER Maryland programs are funded by a charge on your energy bill. EmPOWER programs can help you reduce your energy consumption and save you money. To learn more about EmPOWER and how you can participate, go to [pepco.com/SaveEnergy](https://www.pepco.com/SaveEnergy).
