

## Maryland Environmental Fuel Source Information

The following environmental information is for Pepco customers who have not chosen an alternative electricity supplier.

Power plants can generate electricity from a number of different fuel sources, resulting in different emissions. Pepco reports fuel sources and emissions data to customers twice annually, allowing customers to compare data among the companies providing electricity service in Maryland.

The electricity provided to Pepco's customers is supplied by the PJM Interconnection (PJM). PJM is the federally regulated regional transmission system operator that coordinates the movement of wholesale electricity in all or parts of Delaware, Illinois, Indiana, Kentucky, Maryland, Michigan, New Jersey, North Carolina, Ohio, Pennsylvania, Tennessee, Virginia, West Virginia and the District of Columbia.

The standardized environmental data provided are for January 1, 2022 – December 31, 2022. This disclosure is required by the Public Service Commission.

For additional information, visit our website at [pepco.com](https://www.pepco.com).

## ENERGY SOURCE (FUEL MIX)

January 1, 2022 – December 31, 2022

Coal	20.16%
Natural Gas	40.08%
Nuclear	32.69%
Oil	0.22%
Fuel Cell	0.03%
Other	0.01%

### Renewable Energy

Captured Methane Gas	0.21%
Geothermal	0.00%
Hydroelectric	0.99%
Solar	1.11%
Solid Waste	0.48%
Waste Heat	0.05%
Wind	3.79%
Wood or other Biomass	0.19%
Unspecified Renewable	0.00%
<b>Total</b>	<b>100%</b>

**Renewable energy sources subtotal: 6.82%**

## AIR EMISSIONS

The amount of air pollution associated with the generation of electricity for the PJM region, which includes Pepco, is shown below.

### Pounds Emitted per Megawatt Hour of Electricity Generated

	Pepco	Mid-Atlantic Regional Average
Sulfur Dioxide (SO <sub>2</sub> )	0.44	0.44
Nitrogen Oxides (NO <sub>x</sub> )	0.33	0.33
Carbon Dioxide (CO <sub>2</sub> )	810.8	810.8

CO<sub>2</sub> is a "greenhouse gas," which may contribute to global climate change. SO<sub>2</sub> and NO<sub>x</sub> released into the atmosphere react to form acid rain. NO<sub>x</sub> also reacts to form ground level ozone, an unhealthy component of "smog."
