

# Cash incentives are available for tuning up your air conditioner

Heating, ventilation and air conditioning (HVAC) systems can represent up to 30% of your business' energy use.

Enhancing your HVAC unit, including installing or upgrading economizers, offers valuable benefits:

- Energy cost savings
- Lower maintenance costs
- Extended equipment life
- Improved indoor air quality

Our Pepco Commercial and Industrial Energy Savings Program offers cash incentives that cover up to 90% of the cost (a value of up to \$270 per HVAC unit) for an enhanced HVAC tune-up.

---

An Exelon Company

To help you maintain or upgrade your HVAC system, our Pepco Commercial and Industrial Energy Savings Program also offers a comprehensive list of experienced contractors who are familiar with the program and can perform the tune-up.

You are not required to use a contractor from our Trade Ally Network to be eligible for the HVAC tune-up incentives.

Now is the time to get your HVAC systems serviced before the weather warms up.
