

Environmental Information for Standard Offer Service Provided by Pepco

THIS DISCLOSURE IS REQUIRED BY THE
DISTRICT OF COLUMBIA PUBLIC SERVICE COMMISSION

The following environmental information is for Pepco customers with Standard Offer Service. Standard Offer Service is provided to those customers who have not chosen an alternative electricity supplier.

Power plants can generate electricity from a number of different fuel sources, resulting in different emissions. Pepco will report fuel sources and emissions data to customers twice annually, allowing customers to compare data among the companies providing electricity service in the District of Columbia.

The standardized environmental data provided are for January 1, 2017 through June 30, 2017.

For additional information, visit our website at pepco.com.

(continued on the reverse side)

An Exelon Company

ENERGY SOURCE (FUEL MIX) JANUARY 1, 2017 - JUNE 30, 2017

Coal	32.7%
Gas	24.8%
Nuclear	36.5%
Oil	0.2%
Unspecified Fossil	0.0%

Renewable Energy

Captured Methane Gas	0.3%
Geothermal	0.0%
Hydroelectric	1.5%
Solar	0.2%
Solid Waste	0.5%
Wind	3.1%
Wood or other Biomass	0.2%
Unspecified Renewable	0.0%
Total	100%

Renewable energy resource subtotal: 5.9%

Although the renewable energy resource subtotal in the District is 5.9%, this supply must comply on an annual basis with the District of Columbia Renewable Energy Portfolio Standard (RPS) requirements of 15.0% for the 2017 year. Pepco requires the Standard Offer Service suppliers to purchase renewable energy and Renewable Energy Credits from approved resources in the District of Columbia and the PJM area.

AIR EMISSIONS

The amount of air pollution associated with the generation of electricity production for Pepco and for the Mid-Atlantic region is shown below.

Pounds Emitted per Megawatt Hour of Electricity Generated

	Pepco	Mid-Atlantic Regional Average
Sulfur Dioxide (SO ₂)	0.8	0.8
Nitrogen Oxides (NO _x)	0.7	0.7
Carbon Dioxide (CO ₂)	937	937

CO₂ is a "greenhouse gas," which may contribute to global climate change. SO₂ and NO_x released into the atmosphere react to form acid rain. NO_x also reacts to form ground level ozone, an unhealthy component of "smog."
