SMALL GENERATOR INTERCONNECTION APPLICATION CHECKLIST
(for non Net Metering Customers)

We support renewable energy and partner with our customers to ensure safe and reliable interconnection of renewable energy into the electric grid.

**Interconnection Process**

- Customers who generate their own electricity with renewable energy sources can interconnect with the electric grid
- Green Power Connection™ (GPC) is Pepco’s process for facilitating small generator interconnections and net energy metering (NEM) requests
- Small generator technologies that qualify for interconnection with our system include solar (photovoltaic or “PV”), wind, biomass, anaerobic digestion, geothermal electric, fuel cells using renewable sources, hydro, and cogeneration and microturbines. See our GPC website for more details
- Title 15, Chapter 40 of the D.C. Municipal Regulations for Small Generator Interconnection Rules (SGIR) defines the interconnection application process Pepco follows

**Application Forms and Fees**

- A fully completed and signed *Interconnection Application and Agreement* is required, along with the fee for Level 2, 3, and 4 applications. Most residential systems qualify for the Level 1 application
- The interconnection application is a two-part process. See the back of this sheet for the Level 1 components and requirements of Part I and Part II. See the SGIR for details on the Level 2, 3, or 4 application
- Pepco will calculate and invoice the contractor for the Level 2, 3, and 4 application fee
- For customers who wish to feed generation back into the grid and receive bill credits, a fully completed and signed *D.C. Customer Net Energy Metering Contract* also is required and a net-capable meter installed at your premise. See our *Net Energy Metering and Small Generator Interconnection Application Checklist* for details
- Apply online at www.pepco.com/gpc

Green Power Connection Interconnection Application Process

<table>
<thead>
<tr>
<th>Steps</th>
<th>Actions</th>
<th>Responsible</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Research</td>
<td>Research the various types of renewable energy systems available and decide which system best fits your consumption needs. Renewable energy-generating systems can be sized to meet up to 100% of your energy needs. Understand your electrical load and energy consumption history.</td>
<td>Customer</td>
</tr>
<tr>
<td>2. Select</td>
<td>Interview and select a reputable installing contractor.</td>
<td>Customer</td>
</tr>
<tr>
<td>3. Apply</td>
<td>Understand the documentation needed with the interconnection agreement (e.g., rebate forms, permit applications, inspection forms). Apply and submit Part I of Pepco’s interconnection application and agreement along with the supporting documentation. For applicants in the District of Columbia who wish to net meter, a signed D.C. NEM Contract is also required. Applications without supporting documentation will be delayed. You can re-submit a corrected application and documentation. Pepco will send contractor or customer an invoice for any application fee.</td>
<td>Customer</td>
</tr>
<tr>
<td>4. Approval</td>
<td>Wait for Pepco’s Approval to Install before installing any renewable generator equipment. Pepco will provide you a written screening result or Approval to Install.</td>
<td>Customer, Pepco</td>
</tr>
<tr>
<td>5. Install</td>
<td>Begin constructing and installing your renewable generator facility.</td>
<td>Customer</td>
</tr>
<tr>
<td>6. Inspect</td>
<td>After installation, submit Part II of our interconnection agreement, including a copy of the certificate of completion and the inspection certificate. We will review your documentation to verify the interconnection application meets regulatory requirements and the application fee, if any has been paid.</td>
<td>Customer, Pepco</td>
</tr>
<tr>
<td>7. Meter</td>
<td>We will install your net-capable meter.</td>
<td>Pepco</td>
</tr>
<tr>
<td>8. Authorization</td>
<td>We will send you an Authorization to Operate letter.</td>
<td>Pepco</td>
</tr>
<tr>
<td>9. Operate</td>
<td>Receipt of the authorization letter means you can operate your renewable system.</td>
<td>Customer</td>
</tr>
</tbody>
</table>

Level 1 Interconnection Application and Agreement Details

Part I requires:
- Customer of record contact information (name, mailing and email address, phone numbers)
- Equipment and electrical contractor information
- Facility information (utility and electric supplier serving the facility, utility account number)
- Renewable Generator System Information
  - Inverter manufacturer name and model number
  - Alternating Current (AC) generator nameplate rating
  - System design capacity
  - Generator type (PV, reciprocating engine, fuel cell, etc.)
  - Energy source (solar, wind, hydro, etc.)
  - Estimated commissioning date
- Customer’s signature
- A single-line drawing of the system and a site map

Part II requires:
- Customer and system information must match the Part I submission
- Certification of Completion
- Inspection Certificate (with clearly identified system type)
- Customer’s signature

The Level 2, 3, and 4 Interconnection Application and Agreement requires additional information. See the application form for details.

Frequently Asked Questions

Where do I start? Prior to installing or operating a generator facility, customers are required to apply and receive Pepco’s written approval. Additional details are on our website.

How do I apply? Complete and submit the interconnection application at Pepco.com/gpc.

How can I find out the amount of electricity I will generate? Many systems come furnished with a monitoring device that shows generation. Discuss this with your contractor.

Are there other factors to consider? Yes. Electricity generation will fluctuate based on several factors — clouds, darkness, and dirty or snow-covered solar panels all limit generation. We recommend that you understand how your system will operate under varying conditions. Also, you may still receive a Pepco bill even though you are generating electricity.

Why could my interconnection application be delayed or denied? Applications are delayed or denied if required information is incomplete or missing, documents are unsigned, or required fee payment is not received. In some regions, our utility may not have an open circuit, making interconnection unavailable.

Can you recommend a reputable installer? No. We recommend you research and consult with an installer or contractor by using publically available resources. If you work with a contractor, it is your responsibility to ensure they use the appropriate forms, fees, and documentation throughout the interconnection process.
